Hazardous Weather

A cold front will move south across the South Plains region this morning and afternoon, bringing a chance for thunderstorms through tonight. In addition, storms will develop across the higher terrain of New Mexico and move into the Western South Plains this evening. The primary threats with these storms will be gusty winds, cloud to ground lightning strikes, and locally heavy rainfall.

Temperatures will warm to above normal today while thunderstorm coverage is expected to increase, especially over the higher terrain. Local heavy rainfall could lead to localized flash flooding.

Hazardous Weather

A cold front will move into North Texas late tonight and reach near the I-20 corridor after midnight, before pushing into central Texas by sunrise Saturday. The passage of the cold front will bring scattered showers and thunderstorms with the best chances across the northeast quarter of the area. Scattered rainfall amounts between a half inch and an inch possible. In addition, a few strong to severe storms will be possible north of I-20.

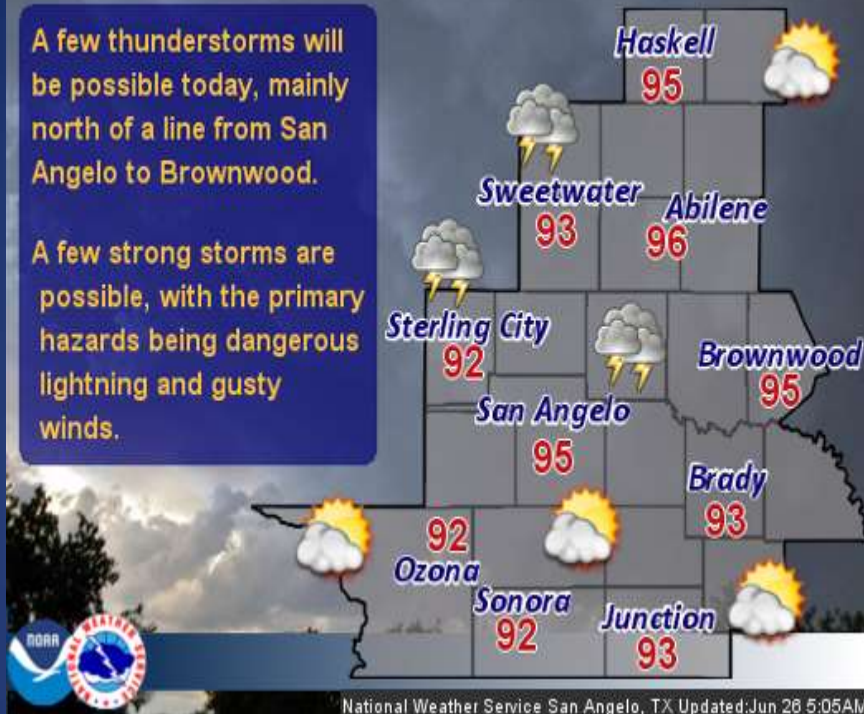

Isolated to scattered showers and thunderstorms will be possible over the northern Coastal Bend and Victoria Crossroads. Afternoon temperatures will range from the upper 90s over the Rio Grande Plains to lower 90s over the Victoria Crossroads.

Hazardous Weather

A Few Thunderstorms Today

A few thunderstorms will be possible today, mainly north of a line from San Angelo to Brownwood.

A few strong storms are possible, with the primary hazards being dangerous lightning and gusty winds.

There is a chance for showers and thunderstorms today, generally north of a San Angelo to Brownwood line. Severe weather is not anticipated; however, a few storms may produce localized gusty winds. Expect afternoon temperatures in the low to mid 90s.

Friday... Thunderstorms Possible

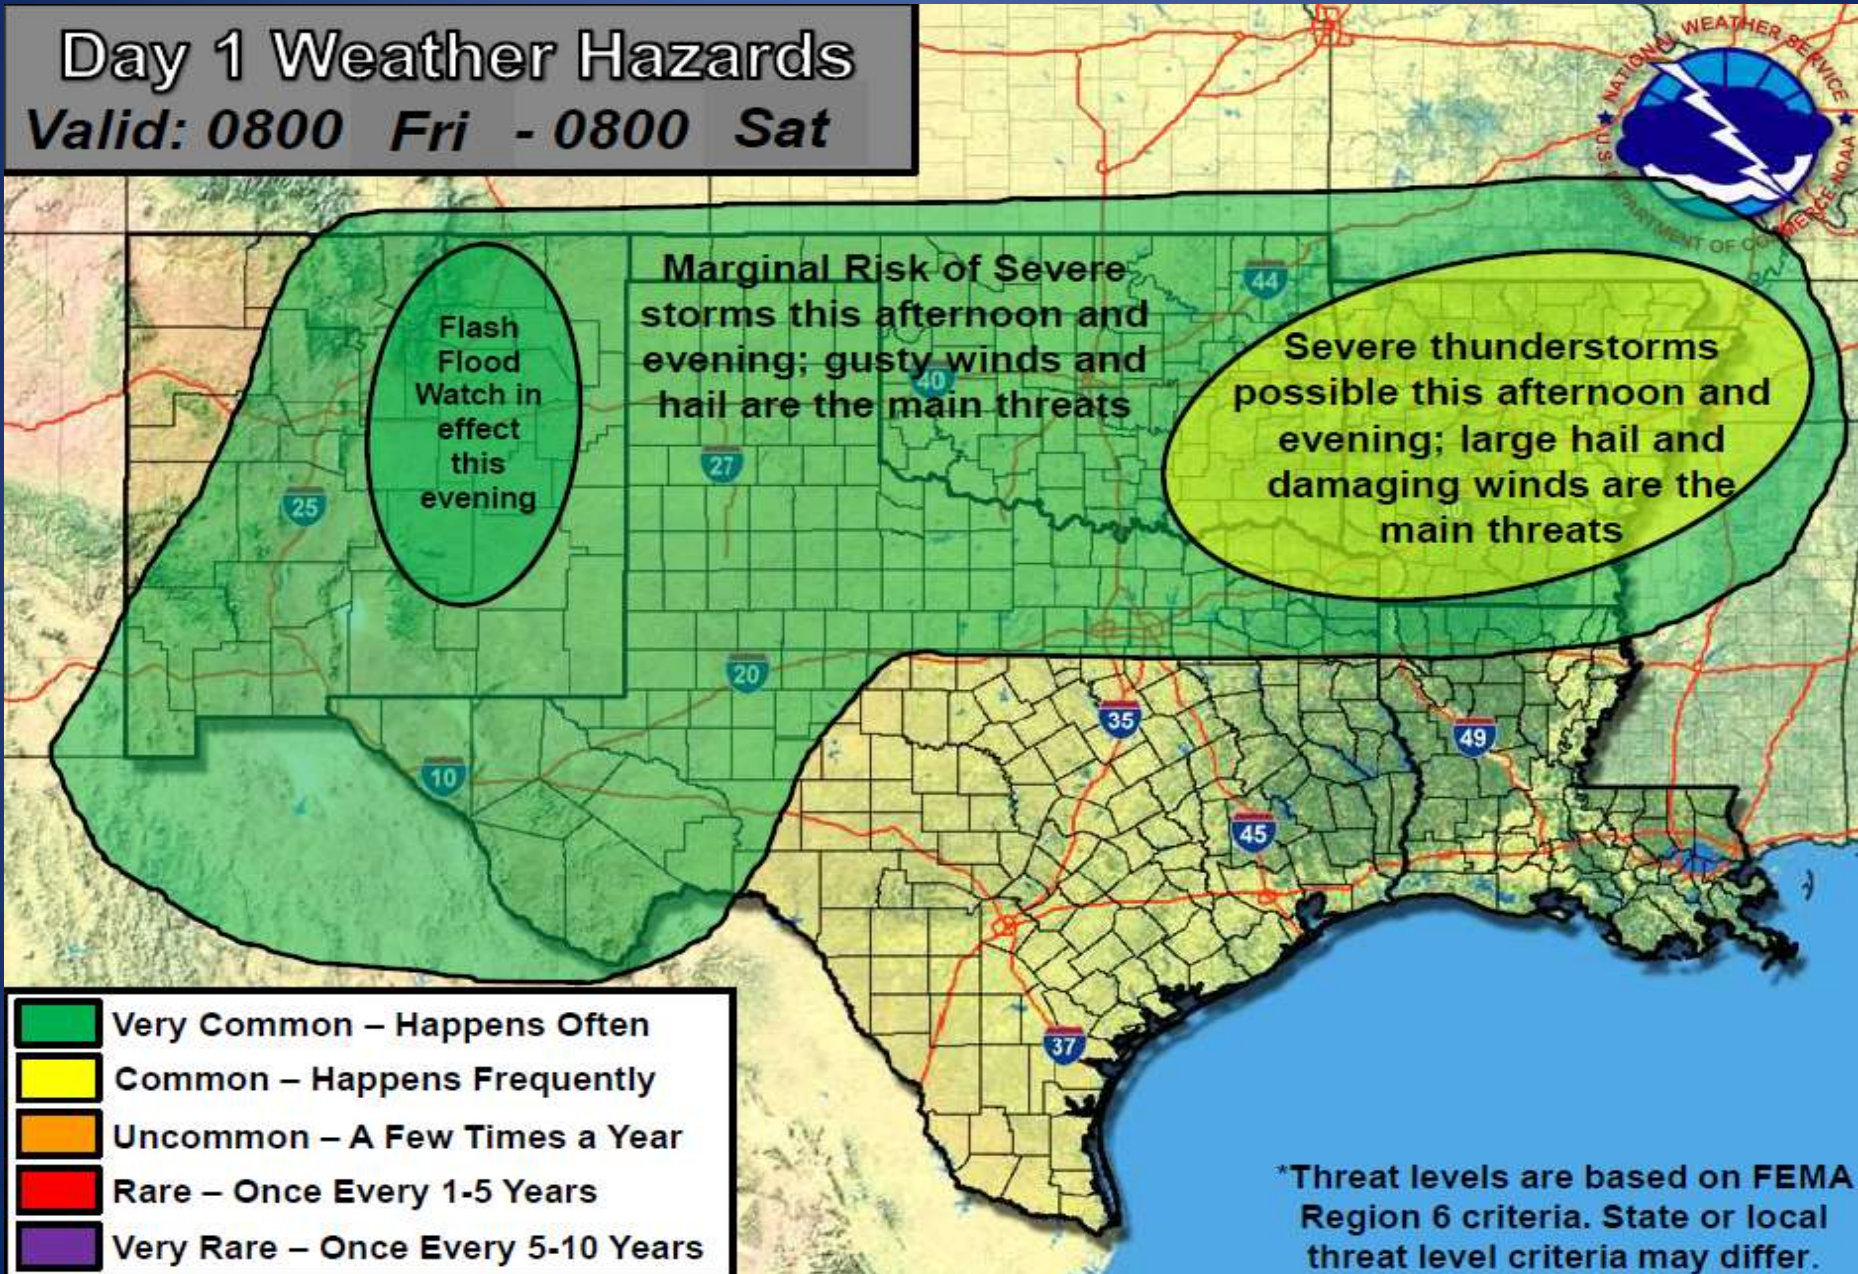

East to southeast winds will sustain the inflow of moist unstable air into southern New Mexico and west Texas and this will again generate mainly afternoon and evening showers and thunderstorms over portions of the region. Skies will be partly sunny and high temperatures will be in the lower and middle 90s lowlands with 70s and 80s mountains.

Hazardous Weather

Day 1 Weather Hazards

Valid: 0800 Fri - 0800 Sat

Hazardous Weather

Day 2-3 Weather Hazards

Valid: 0800 Sat - 0800 Mon

Isolated areas
of heavy rain
and flash
flooding
possible over
NM, especially
over burn scar
locations

A few strong storms
possible on Saturday

- Very Common – Happens Often
- Common – Happens Frequently
- Uncommon – A Few Times a Year
- Rare – Once Every 1-5 Years
- Very Rare – Once Every 5-10 Years

*Threat levels are based on FEMA
Region 6 criteria. State or local
threat level criteria may differ.
